PROFILE

Backend developer building services and tools for complex workflows. My T-Bank work covers product experiment configurations, data processing and observability. In project work, I connect APIs, databases, mobile interfaces and AI tools.

EXPERIENCE

T-Bank · Backend and data workflows for the loyalty platform

Selected work, 2026

- Developed declarative experiment configurations combining audience selection, conditions and cashback actions. Selected experiments can be prepared without code changes.
- Worked with analysts on scenarios and documentation; implemented support for parallel independent experiments and adapted the approach across multiple product areas.
- Developed streaming data delivery to Kafka using message contracts. Implemented PostgreSQL-backed delivery cursors, a REST API and lag metrics in a Kotlin/Spring service.
- Added pipeline result validation and diagnostic data to explain how experiments are applied.

Project and freelance development · Project work since 2024

Built backend services, REST APIs, Telegram bots and integrations; designed data models and prepared applications for deployment. Worked independently and in small teams.

PROJECTS

CODY · Personal working prototype

An AI companion for controlling Mac work sessions from an iPhone. React Native/Expo, Node.js, TypeScript, a typed WebSocket protocol, message validation and shared project context. Voice interaction runs while the app is active.

BPMN.space · Team hackathon prototype

Contributed to a project that uses documents and notes as a starting point for an editable BPMN model, with clarification questions and explicit assumptions.

SKILLS

Python, SQL, FastAPI, Django/DRF, PostgreSQL, Airflow, Kafka, pytest, Docker, Git.

Additional: Kotlin/Spring, TypeScript, React Native, Node.js, WebSockets.

EDUCATION AND ACHIEVEMENTS

Central University, Moscow · First-year bachelor’s student.

PROD programming competition: winner, 2026; finalist, 2025.

English: B1, self-assessed.
